TO: ALL ROOTES GROUP DEALERS

SUBJECT: HYPOID REAR AXLE SERVICING

MODEL: ALL LIGHT CAR RANGE

With the introduction of the hypoid rear axle on the light car range of the Rootes Group products, it is important that the following instructions be brought to the attention of all service personnel.

- A. The rear axle should be when possible "Run In" at normal speeds up to 40 M. P. H. for at least 250 miles.
- B. The axle must be drained when hot at the 1000 mile inspection and filled with a heavy duty high pressure gear oil, i. e. E. P. 90 in the winter and E. P. 140 in the summer.
